

Program:-

```
import java.awt.*;
import javax.swing.*;

/*<applet code=JPassword.class width=500 height=500></applet>*/

public class JPassword extends JApplet
{
    public void init()
    {
        Container c=getContentPane();
        JPasswordField jp=new JPasswordField("#",2);
        jp.setEchoChar('#');
        c.add(jp);
    }
}
```

Output:-
